

Jagraj Gill

Canadian Citizen | jsg51@sfu.ca | github.com/jagrajg | jagrajgill.tech | linkedin.com/in/jagrajgill

Education

Simon Fraser University – Bachelor of Science in Computing Science

Expected: Dec 2027

Skills

Languages: C, C++, Python, Java, JavaScript, TypeScript, HTML, CSS, x86 Assembly

Frameworks: React, React Native, Node.js, Express.js, REST APIs, GraphQL, FastAPI, CI/CD, Agile, SDLC

Databases & Tools: Git, Docker, MongoDB, MySQL, SQLite, AWS S3, Linux, Confluence, TCP/IP

Experience

Software Engineer Intern, Savi Finance – Toronto, ON

May 2025 – Dec 2025

- Architected an AI agent orchestration engine and MongoDB schema to autonomously interpret and dispatch work orders to third-party APIs, eliminating manual overhead
- Unified React and React Native feature parity via a mobile-optimized GraphQL schema extension, delivering consistent UX to 1000+ users
- Cut image load failures by 10%, boosting upload reliability for 1000+ users via AWS S3 and GraphQL
- Debugged a login flow locking users out on wrong email entry, adding React handlers for in-place correction

Projects

HTTP Web Server – C++, TCP/IP, HTTP

- Engineered a low-level C++ HTTP server via POSIX sockets, handling TCP connections and serving static HTML, CSS, JavaScript, and image files
- Delivered full GET, POST, and DELETE support with spec-compliant status codes and response headers
- Implemented MIME detection, POST parsing, and error handling for reliable, debuggable request processing
- Enabled concurrent browser and curl client support via poll()-based non-blocking I/O without threads

FirstCall – Swift, SwiftUI, AVFoundation, Speech Framework

- Developed an offline iOS app that teaches children how to call 911 through realistic dispatcher simulations
- Integrated Apple's Speech framework for real-time speech recognition, with AVFoundation text-to-speech delivering dispatcher prompts
- Designed a branching conversation system that dynamically routes callers through emergency-specific flows
- Recreated the full emergency call experience, from a locked-screen emergency dialer to a dispatcher call flow

Smart Environmental Monitoring System – C, JavaScript, SQLite, FastAPI

- Built a full-stack IoT monitoring system that streamed live temperature and humidity readings from an embedded sensor device to a web dashboard
- Developed a FastAPI backend that ingested JSON sensor data over Wi-Fi, storing readings in SQLite and powering a live JavaScript dashboard with 24-hour trend views
- Designed fault-tolerant data ingestion that handled connection failures without crashing or failing silently

AI-Powered Study Assistant – Python, JavaScript, FastAPI, Gemini API

- Engineered a PDF-to-flashcard pipeline via PyPDF and Gemini API, automating study material generation and cutting manual prep from hours to seconds
- Enforced a strict JSON schema requiring all flashcard fields, reducing incomplete and malformed AI output
- Built Python validation to reject empty or malformed flashcard content before it reached the UI
- Developed an interactive flashcard UI in JavaScript with flip animations and keyboard navigation
